Case	severity high, status open, opened 2026-10-03T07:43:14.342370Z

1. What happened

An attacker broke into the public web server web01 early on 14 September 2026 by guessing a weak password, took full control, and copied the application's configuration, including passwords and keys, to an outside server.

2. Key figures

Figure	Value
Evidence items	4
Events in the timeline	96
Alerts	10 (high 8, medium 2)
Active indicators	5
Custody chains verified	4 of 4

3. Impact

The passwords and keys in the copied configuration must be treated as stolen. No evidence shows access to other servers.

4. Actions taken

The server was isolated, the stolen secrets are being rotated, and the server is being rebuilt. Password logins over SSH are being switched off on all public servers.

5. Decisions needed

Approve the emergency maintenance window for rebuilding web01.

6. Report provenance

This report was rendered from an immutable data snapshot. Re-rendering the snapshot gives the same bytes; the signed manifest lists the SHA-256 of every artifact.

Item	SHA-256
